*In the fight against unhealthy elements,  
VICTORY can be yours.*

Empire Animal Health has spent years researching and developing a product to specifically help increase healthy immune function by utilizing a multi-faceted polyherbal approach that not only helps stimulate but strengthen the immune system at its very core... the result is Victory.

In an effort to quickly stimulate an immune response we added two key ingredients, emblica officinalis (an antioxidant with the richest natural source of Vitamin C) and tinospora cordifolia, which stimulates macrophage activity (macrophages are white blood cells, acting in the specific defense system of vertebrate animals. Their role is to envelope cellular debris and pathogens, either as stationary or mobile cells).

Once we managed to stimulate immune function with a quick response our goal then was to strengthen the immune system. We did this by adding colostrum, which contains immunoglobulin. Though there are five types of immunoglobulin present in colostrum, Victory's colostrum contains mostly IgG. IgG are protein molecules that are effective in fighting bacterial and viral infections, parasites, and yeast.

**Directions:** Shake well before using. Give one ounce daily for three weeks. A maintenance serving of one half ounce may be given there after, unless exposed to unhealthy elements. (Scoop size is one half ounce.)

**Active Ingredients:** tinospora cordifolia, emblica officinalis, colostrum
